

## Rifkin Cylinder Core

Part number: CL-RFK01

*Example of custom CyberLock Cylinder*

The CyberLock Rifkin cylinder is a custom cylinder manufactured for the A. Rifkin Co., a maker of currency transfer bags and banking supplies. Videx supplies a CyberLock core with a custom rear section that fits into the company's zipper locking mechanism used on their currency bags. The core's electronics are encased in a nickel-plated steel shell; the rear section is made of brass. The CyberLock provides features not found on currency bags before, such as access control and auditing of lock access.

CyberLock cylinders have several advantages over traditional cylinders:

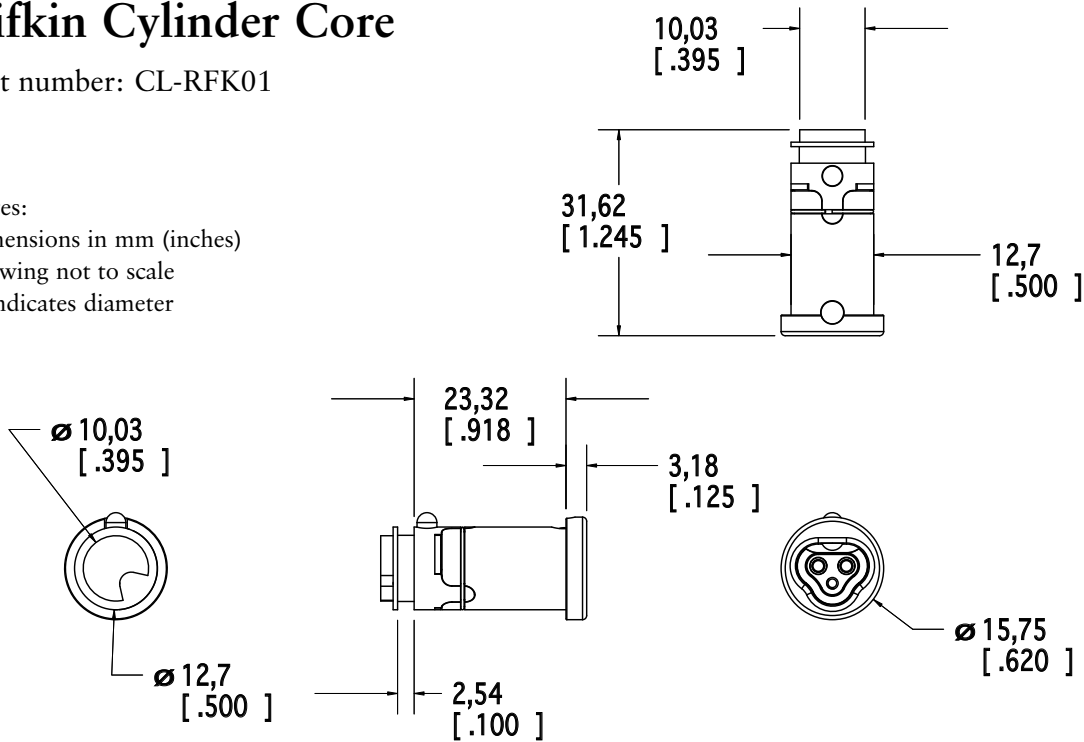

- Keys cannot be duplicated.
- The lock has no keyway to pick.
- Various entry times and restrictions can be set.
- Both the locks and keys track all actions.

Custom cylinders require a minimum order and additional manufacturing lead-time. Please contact our sales department for details.

Part number: CL-RFK01

Notes:  
 Dimensions in mm (inches)  
 Drawing not to scale  
 Ø indicates diameter

## Specifications

- |                                     |   |
|-------------------------------------|---|
| <b>Finish</b>                       | • Brass with a nickel-plated front  |
| <b>Operating Temperature</b>        | • -40° to 160° F; -40° to 70° C, non-condensing   |
| <b>Power Requirements</b>           | • None; power is supplied by the key's battery.   |
| <b>Hardware Security Features</b>   | <ul style="list-style-type: none"> <li>• No keyway to pick.</li> <li>• If torque is applied to the front of the cylinder, it separates from the back half leaving the cylinder in the locked position.</li> <li>• Resists electric charge applied to the face of the lock.</li> </ul>   |
| <b>Hardware Options</b>             | <ul style="list-style-type: none"> <li>• Tamper pin which blocks the locking pin automatically when impact force is applied to the front of the lock.</li> <li>• Hardened metal.</li> <li>• Drill-resistant pins.</li> </ul>  |
| <b>Number of Keys per Lock</b>      | • No limit to the number of keys that the lock can support.   |
| <b>Number of Locks per Key</b>      | <ul style="list-style-type: none"> <li>• Up to 3300 locks can be accessed with a standard user key.</li> <li>• A Master key has no limit to the number of locks it can access.</li> <li>• A database has no limit to the number of locks or keys it can manage.</li> </ul>  |
| <b>Lost Keys</b>                    | • The system can designate and disable lost keys.   |
| <b>Access Schedules</b>             | <ul style="list-style-type: none"> <li>• Schedules programmed into the CyberKey provide complete control over specific days and times that a key will operate. A key can use up to 49 different schedules to access locks.</li> <li>• A database has no limit to the number of schedules it can manage.</li> <li>• Holidays may be set as exceptions to the schedules.</li> </ul> |
| <b>Audit Capacities</b>             | <ul style="list-style-type: none"> <li>• The lock remembers the last 1100 events with date and time.</li> <li>• A key remembers up to 3900 events with date and time. It can be set to keep only the most recent set of events or to stop operating when its audit trail is full.</li> </ul>  |
| <b>Electronic Security Features</b> | <ul style="list-style-type: none"> <li>• Key Expiration – a begin/end date range can be set during which the key will work.</li> <li>• Delayed entry – a lock can be set to delay entry for up to 20 minutes.</li> <li>• Multiple key custody – a lock may be set to require more than 1 key (up to 4) before opening.</li> </ul>   |
| <b>Electronic Rekeying</b>          | • Rekeying a system is done via the software; no need to install new locks and issue new keys.  |
